

CLUB NIGHT

Cooroy Memorial Hall

TUESDAY AUGUST 2nd 2022

Doors open 6pm

Cultivating a healthy soil microbiome

Soil microbiologist/mycologist Dr Sandra Tuszynska will explain how soil microbes feed, nourish and protect plants and introduce the key microbes in a functional soil food web, essential for plant health, nutrition, resistance to pests and pathogens, and resilience to drought.

She will discuss the essential role the soil microbiome, especially soil fungi play in the sequestration of carbon into soils, food security & detoxification of our environment. Sandra will demonstrate how you can easily cultivate beneficial soil microbes and provide your plants a functional soil food web to support their growth.
